

League Profitability & Margin Analysis

A public portfolio edition of my 2024 Excel analysis across twelve sports. It shows the model, review process, and decision framework without exposing proprietary dollar amounts or internal access information.

COST CATEGORIES

2024

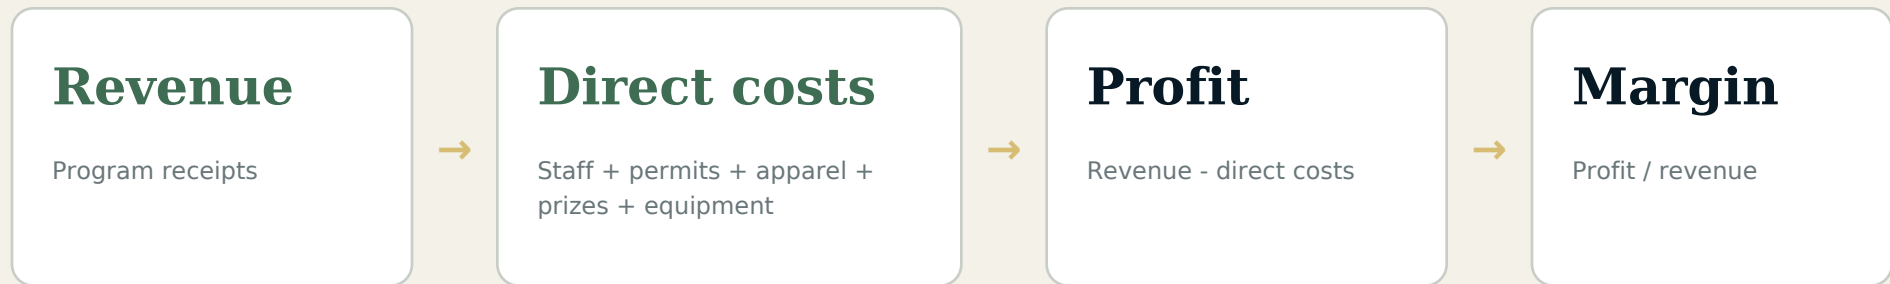

REPORTING PERIOD

WHAT I BUILT

- I organized league and program records into sport-specific tabs with one repeatable calculation structure.
- I combined revenue with staffing, permits, apparel, prizes, and equipment to calculate profit and margin consistently.
- I created sport totals so managers could compare scale, profitability, and the operating costs affecting performance.
- I preserved program-level detail so a sport average could be traced back to individual leagues and programs.

THE MODEL

A repeatable calculation from operating inputs to a comparable ma

How I used the output

COMPARE

I used a consistent definition so every sport and program could be reviewed on the same basis.

DIAGNOSE

I separated direct-cost categories to show whether staffing, permits, apparel, prizes, or equipment was driving the result.

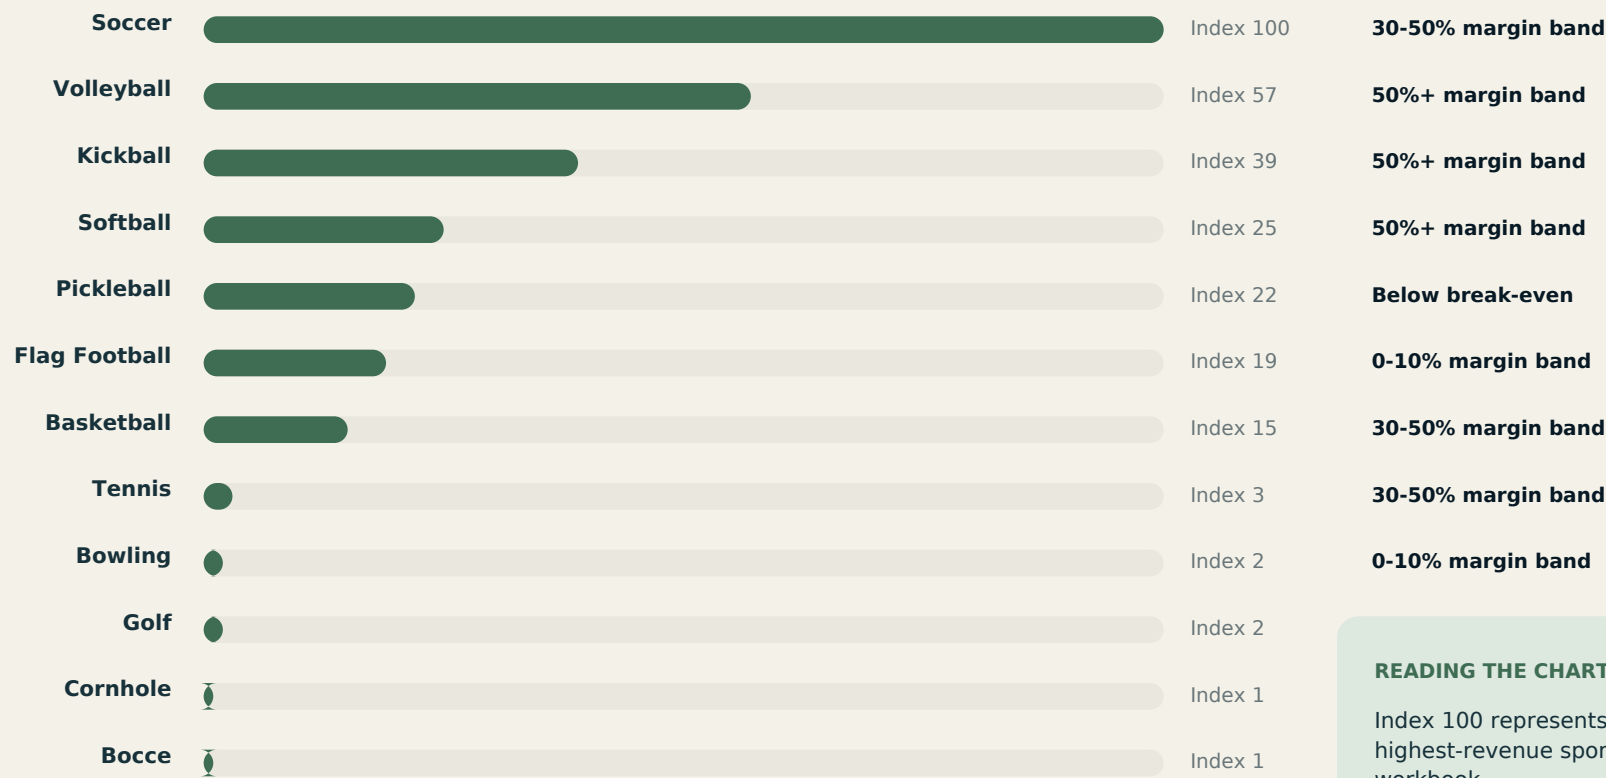

TRACE

I retained the underlying program rows, allowing an aggregate sport result to be investigated at the league level.

PORTFOLIO OVERVIEW

Relative revenue scale

Indexed to the largest sport; exact dollar values are intentionally withheld.

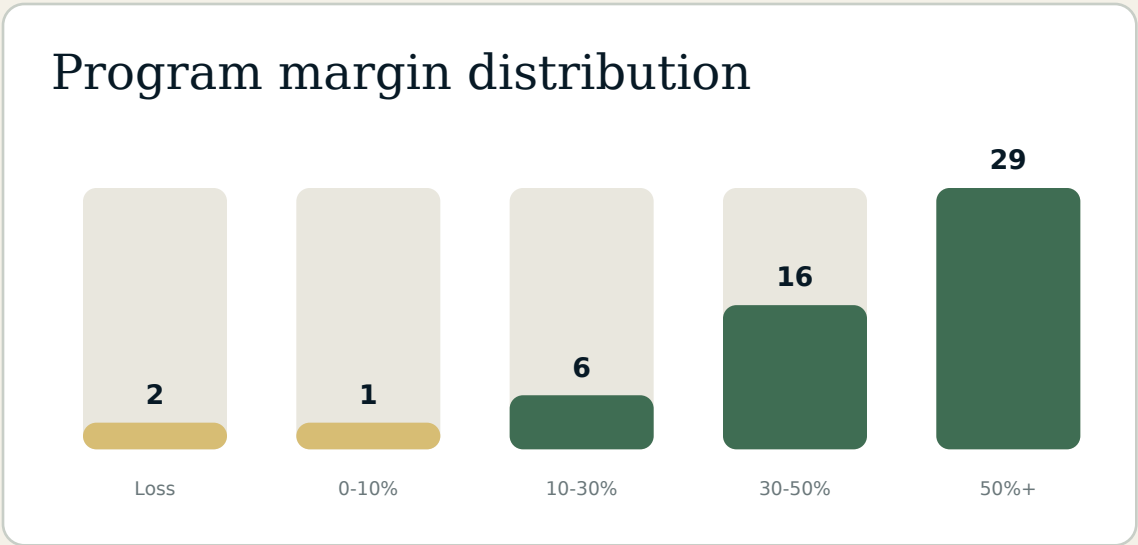

READING THE CHART

Index 100 represents the highest-revenue sport in the workbook.

SPORT-LEVEL REVIEW

Kickball

WHAT THE MODEL SURFACED

The sport showed strong aggregate profitability across the workbook. Permits remained the largest modeled direct-cost category, while the program-level distribution identified exceptions that still warranted review.

LARGEST MODELED COST DRIVERS

Permits + Staff

SPORT-LEVEL REVIEW

Golf

PROGRAM RECORDS

2

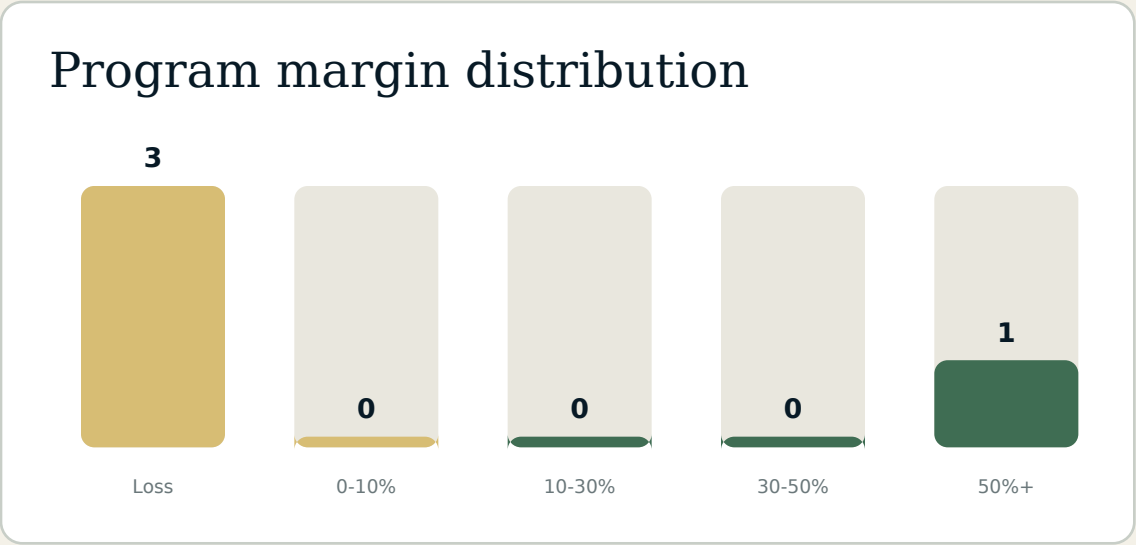

REVENUE SCALE INDEX

Below 0%

WEIGHTED MARGIN BAND

About 25%

PROGRAMS ABOVE BREAK-EVEN

WHAT THE MODEL SURFACED

The sport finished below break-even on a weighted basis. Permits was the largest modeled direct-cost category, making program-level review especially important.

Program margin distribution

WHAT THE MODEL SURFACED

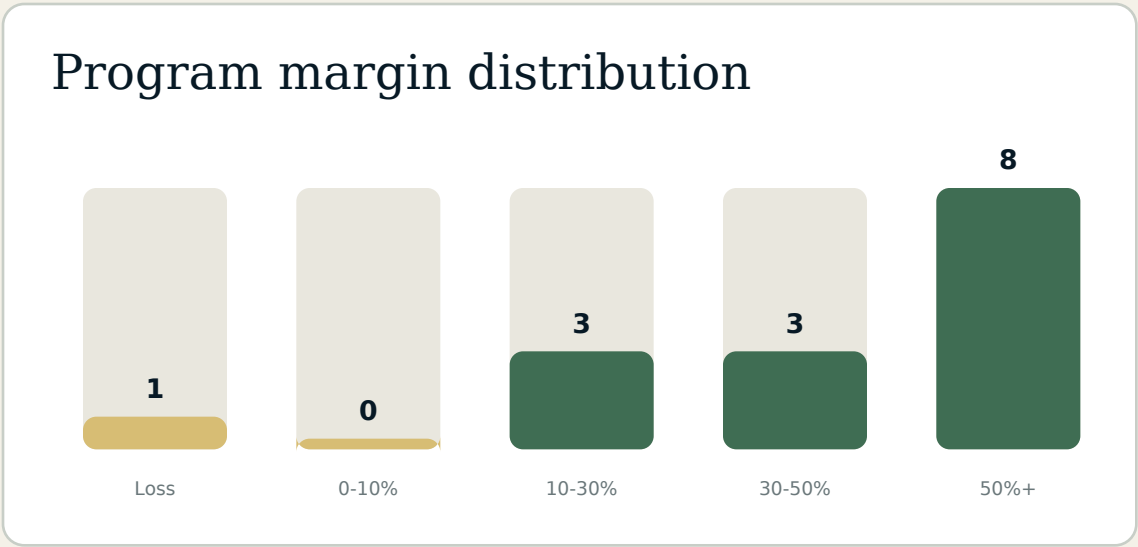

The sport showed strong aggregate profitability across the workbook. Permits remained the largest modeled direct-cost category, while the program-level distribution identified exceptions that still warranted review.

LARGEST MODELED COST DRIVERS

Permits + Staff

SPORT-LEVEL REVIEW

Cornhole

WHAT THE MODEL SURFACED

The sport showed healthy aggregate profitability. Staff was the largest modeled direct-cost category, and the program-level view made it possible to distinguish consistent performers from outliers.

REVENUE SCALE INDEX

0-10%

WEIGHTED MARGIN BAND

About 45%

PROGRAMS ABOVE BREAK-EVEN

WHAT THE MODEL SURFACED

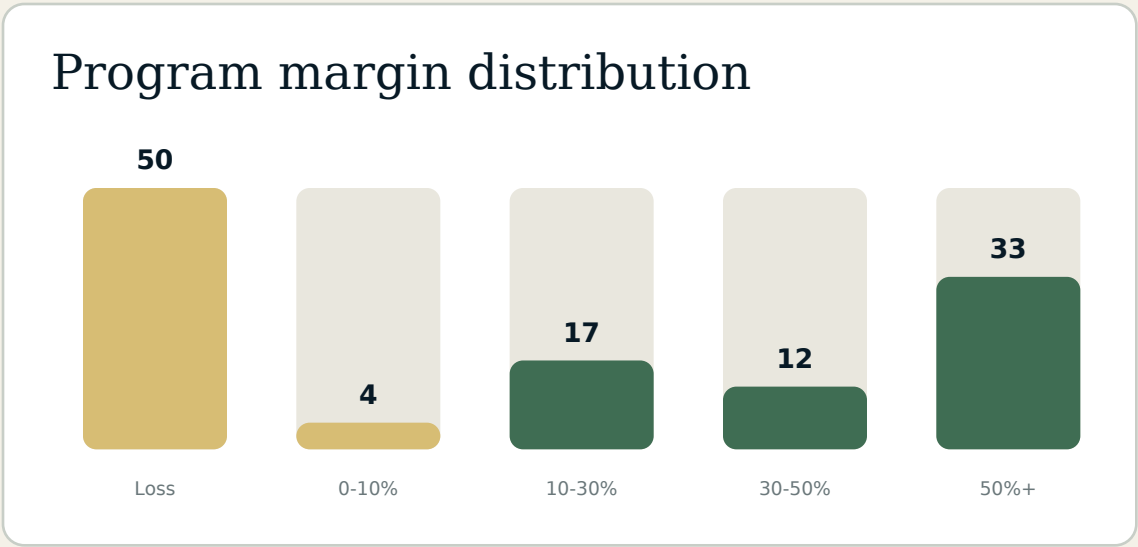

The sport was close to break-even overall. Permits was the largest modeled direct-cost category, and results varied enough that the sport total alone could hide individual program issues.
